<sup>&</sup>lt;sup>a</sup> Pipe inside diameter is same as nominal pipe size

<sup>2</sup> Suction line pressure drop assuming half of the pressure drop occurs upstream of the reference temperature.

Need more information? Download Chemours refrigerant expert software for access to line sizing, refrigerant properties, and more: https://www.opteon.com/en/support/product-tools/refrigerant-expert-tool/thank-you-cre

The line sizes are theoretical estimates based on best practices following industry guidelines.

<sup>&</sup>lt;sup>1</sup> Tons based on standard refrigerant cycle of 40 °C saturated liquid and saturated evaporator outlet temperature. Liquid tons based on

<sup>-5 °</sup>C evaporator temperature.

 $<sup>^{\</sup>rm 3}$  Discharge line pressure drop calculations assume saturated vapor temperature drop.

<sup>&</sup>lt;sup>4</sup> Dischage pressure drop inlet conditions calcualted assuming isentropic compressor efficiency of 0.7 and pressure corresponding to condenser saturated liquid outlet temperature.

<sup>&</sup>lt;sup>5</sup> Liquid line pressure drop assuming reference temperature at inlet with temperature drop occuring downstream.

<sup>&</sup>lt;sup>6</sup> Thermophysical properties and viscosity data based on calculations from NIST REFPROP program Version 10.

 $<sup>^{7}</sup>$  Capacities based on conditions outside of these tables can be provided upon request.

<sup>&</sup>lt;sup>8</sup> Cells highlighted in gray indicate the calculated velocity from the given saturated temperature drop is outside of the recommended gas line velocities per ASHRAE Refrigeration Handbook.
